SUMMARY

Full Stack Developer who turns ideas into real, working products end-to-end. I approach problems by understanding the whole system, breaking them down, and delivering solutions that actually work in real-world conditions. I focus on ownership, clarity, and execution, so what gets built is reliable, usable, and ready to scale. I work hands-on with data, structuring it, validating it, and using it to drive accurate results and meaningful outputs. I also ensure that applications are properly built, tested, and released, with smooth deployment and stable performance, so systems run consistently as they grow.

EXPERIENCE

Drehill Private Limited

Software Engineer Intern | Remote | May 2025 – Mar 2026

- Delivered multiple **production-level platforms** end-to-end, transforming product requirements into fully functional systems used in real-world scenarios.
- Designed and implemented assessment workflows that handled user evaluations, automated result generation, and improved overall user experience.
- Built the **company's official website** from the ground up, structuring business information, services, and workflows into a clear, accessible platform for users and stakeholders

Graspear Solutions

Full Stack Developer Intern | Remote | Feb 2025 – Jul 2025

- Built a **fitness exercise analysis** system that processed user-uploaded videos and evaluated movement accuracy across 10+ exercise types, reducing manual supervision effort through rule-based and predictive logic that delivered instant automated feedback.
- Developed supporting tools such as scoring systems and interactive modules, enhancing user engagement and data representation clarity across applications.

Koyya Enterprises

Software Engineer Intern | Remote | Sep 2024 – Jan 2025

- Contributed to **Sleek**, a workflow-driven application that tracks 6+ process stages end-to-end, improving validation consistency and reducing execution errors by identifying and resolving 15+ critical bugs in a live environment.
- Built a **language translation application** enabling seamless conversion between languages with a focus on usability and response accuracy.

TECHNICAL SKILLS

Languages | Java, Python

Frontend | React.js, Tailwind CSS, HTML5 / CSS3

Backend | Node.js, Express.js, Spring Boot

AI / LLM | LangGraph, Gen AI, AI Agents

Database | MongoDB, MySQL

Tools / IDE | Docker, Git, GitHub, Render, VS Code

Concepts | DSA, OOP, Scrum, REST APIs

PROJECTS

Virtual Scrum Master

AI Agent Application

- Architected an **AI Scrum Master** that analyzes developer activities (e.g., GitHub events) to progress tasks through the project workflow automatically.
- Eliminated manual project tracking by instantly synchronizing the project board with actual development progress, keeping the team aligned in real-time.

FactorBeam

Assessment Platform

- Built and shipped a live domain-specific platform enabling competitive assessments for real users, from schema to deployment.
- Structured assessment workflows to handle user sessions, test execution, and result generation, ensuring smooth and consistent evaluation experiences.

EDUCATION

Graduated in Computer Science & Technology

Sasi Institute of Technology & Engineering

2022 – 2026 Tadepalligudem, Andhra Pradesh

CGPA 8.5 / 10
